

Easeinbiz

Brand guidelines

The Bold Momentum design system — colors, typography, components, and the rules that keep every screen and every asset feeling like one product.

Bold Momentum

Easeinbiz is the all-in-one business OS — CRM, finance, payroll, forms, and marketing. The brand must say two things at once: "trust me with your money" and "I make running a business lighter."

What the brand feels like

Energetic. Ambitious. In motion. A vivid ocean evolved from our original blue, with orange kept loud but rare — reserved for moments that genuinely need attention. The personality is a fast, confident partner: bold in color, soft in shape, calm in behavior.

The three tensions we balance

Bold, not loud	Ocean carries the energy. Orange never competes with it — two loud colors shouting at once kills a bold brand.
Soft, not toy-like	Rounded 10px corners, generous padding, shadows instead of borders — friendly physics wrapped around serious business data.
Confident, not shouty	Errors speak quietly, delete buttons rest calm until reached for, and numbers do the talking on dashboards.

The one-line brief

If an asset looks calm at first glance and energetic on second look, it's on brand. If it looks busy at first glance, it isn't.

The logo

The Easeinbiz logo is the wave mark in Ocean 600 (#0077B5) with the wordmark in near-black. Always use the provided logo files — never re-draw, re-type, or re-color the mark.

On white / light	Full-color logo: ocean wave + dark wordmark (the file above)
On ink / ocean / photos	Use the white / reversed variant from the logo kit — never the full-color version on dark
Icon only	The wave mark alone for avatars, favicons, and app icons (min 24px)
Minimum size	Full logo never below 110px wide in digital, 30mm in print
Clear space	Keep the height of one wave bar clear on all sides

Never

Stretch, rotate, re-color, add gradients or shadows, place the full-color logo on dark or busy backgrounds, or re-type the wordmark in another font.

Ocean leads everything

Ocean 600 is the brand color. It carries every primary action and brand moment. Aim for ocean family $\approx$ 60–70% of any asset's color weight.

Orange — attention only

Orange marks things that need attention: pending states, alerts, promos, upgrade moments. It never fills large surfaces and never competes with ocean on the same element.

The orange ration

One orange moment per view. If two things are orange, neither is urgent anymore.

Neutrals & semantic

Neutrals are cool, ocean-tinted — never warm gray. Semantic colors are reserved strictly for meaning.

Tone-on-tone rule

Colored text always sits on a tint of its own family — never black on a colored fill. Example: pending pill is Orange 50 background with #7A4E00 text; paid pill is green tint with deep green text.

Sora speaks, Inter works

Two typefaces, strict jobs. Sora (geometric, characterful) for headlines and big numbers. Inter (neutral, legible) for everything else.

Sora 800 — Display & hero numbers

Sora 700 — Page titles

Sora 600 — Card & section headers

Inter 400 — body text, table cells, form fields. The workhorse.

Inter 500 — UI labels and emphasis

Inter 400 muted — metadata, timestamps, helper text

The 15px rule

Sora never appears below 15px. Small Sora gets tiring; keeping it big keeps it special.

Display	Sora 800 · 28px	Body	Inter 400 · 14px
Page title	Sora 700 · 20px	UI label	Inter 500 · 13px
Card header	Sora 600 · 15px	Metadata	Inter 400 · 12px muted

Soft physics

The system's material logic: rounded, breathing, floating. Locked values — do not improvise.

Corner radius	10px controls and cards · 14px modals · 999px pills and badges only. Buttons are never pills.
Spacing scale	4 · 8 · 12 · 16 · 20 · 24 · 32 px. Generous padding is the default — when unsure, add space.
Elevation	Shadows instead of borders. shadow-sm (controls) · shadow-md (cards) · shadow-lg (modals, toasts). All shadows are ink-tinted rgba(11,44,61), never pure black.
Fields	Soft filled: #F9FCFE fill on #E9EFF3 hairline, ocean focus ring at 15% opacity.

Card on shadow

No border. 10px corners. Room to breathe.

Net profit

#2.4M

+18.9%

The hero card rule

At most one solid-ocean hero card per screen. It marks the single number that matters most; everything else stays white.

Buttons

One primary action per view. Secondary is a ocean tinted ghost. Destructive rests calm and only turns solid red on hover.

Hover	Primary → Ocean 700 · Secondary → Ocean 100 · Destructive → solid #E23D3D with white text
Pressed	Scale to 97% — a small tactile press
Disabled	Lightened tints of the same hue — never flat gray
Loading	Inline spinner replaces the icon; label switches to present tense ("Saving")

Forms

Top labels (Inter 12px/500) above soft filled fields, 16px stack gap. Errors: field turns red-tinted (#FEF7F7, red border), message in 11px red under the field. No icons, no shouting.

One screen, every rule

This is what the rules look like when they work together. The numbered pins map to the notes below — show a new designer this page first.

- 1 One hero: exactly one ocean card per screen — the number that matters most. Everything else stays white on soft shadows.
- 2 One primary action, always top-right: the screen's verb. No second ocean button competes with it.
- 3 Orange rationed: one attention moment ("Awaiting payment"). Paid is green, overdue is red — semantic colors carry meaning only.
- 4 Clean white sidebar; the active item is the only colored pill. Ocean tone-on-tone, never solid fills for states.
- 5 Sora only for the title and big numbers; Inter runs everything else. Money right-aligned in tables, hairline dividers, no zebra.

Layout patterns

Sidebar

Clean white with a hairline right border. Active item: Ocean 50 pill with Ocean 700 text. The upgrade card at the bottom is an orange attention moment — the one place orange lives permanently.

Topbar — action forward

Sora page title left; exactly one primary button top-right — it is the screen's verb (New invoice, Run payroll, Add lead). It builds muscle memory across all sixty screens.

Tables — airy lines

Roomy 12px rows, #E9EFF3 hairline dividers, soft hover tint, money right-aligned, status pills in-row. Dense zebra mode exists only as an opt-in for power users.

Overlays

Everything opens as a centered modal: sm 400px confirmations · md 560px forms · lg 760px detail views. 14px corners, ink scrim at 45%.

Quiet moments

Empty states: ocean icon tile, Sora title, one CTA — an invitation, not an apology. Toasts: soft white cards, bottom-right, tinted icon circle.

The golden rules

Ten rules that keep every asset on brand. When in doubt, come back to this page.

Do

Let ocean dominate (60–70% of color weight) with white and cool neutrals around it.

Don't

Use orange and ocean at equal weight — orange is a ration, one moment per view.

Do

Use Sora big and rare: headlines, page titles, hero numbers.

Don't

Set Sora below 15px or use it for body text, tables, or forms.

Do

Round to 10px, pad generously, float cards on soft ink-tinted shadows.

Don't

Draw hard borders around cards, use pure-black shadows, or make pill-shaped buttons.

Do

Reserve green for money-in/success, red for money-out/errors, orange for attention.

Don't

Use semantic colors decoratively — a green header doesn't mean "fresh," it means "paid."

Do

Keep one hero: one ocean card, one primary button, one orange moment per screen.

Don't

Shout — errors, deletes, and alerts speak once, quietly, in tone-on-tone tints.

Where the system lives
